

FAQ – Roblox Builder Pathway.

1. What is the Roblox Builder Pathway?

The Roblox Builder Pathway is a 30-day, hardware-backed program at Gamr Lab in Lagos that helps African gamers become Roblox creators. Selected builders get access to high-spec PCs, stable internet, mentorship, and a production-first curriculum to build and publish Afro-centric Roblox experiences.

2. Who is this program for?

It's for serious, Africa-based creators who want to build on Roblox: scripters/programmers, 3D/environment artists, game designers, and technical creatives. You don't need to be a pro already, but you must have basic skills, a portfolio or samples, and be ready to commit for 30 days of learning.

3. Do I need to pay to join?

No, there is no tuition fee for this pilot cohort. However, selection is competitive and based on your application, portfolio, and availability.

4. Do I need my own laptop or PC?

No. The program is **hardware-backed**. Accepted builders will have scheduled access to our gaming-grade workstations at Gamr Lab. If you have your own capable PC, that's a plus and can supplement your lab time, but it's not required.

5. Where and when does the program take place?

The pilot runs physically at **Gamr Lab, Lagos, Nigeria**, with a mix of in-person sessions and supported independent work. Cohort 1 exact session days and times will be shared with accepted participants.

6. What will I actually learn and build?

You'll work inside Roblox Studio on real projects, covering:

- Luau scripting and core engine concepts
- World-building, level design, and systems design
- Monetization (passes, items, events) and basic analytics

By the end of the Program, each participant will have contributed to at least one **playable experience**, with a strong focus on Lagos/African themes.

7. Can I apply if I'm not in Lagos or can't always come to the Lab?

Yes. As long as you have access to a **laptop/PC that can run Roblox Studio** and **reasonably stable internet** to join class sessions and work on your projects, you can apply.

The Gamr Lab rigs are an extra boost for those who need hardware support or want in-person time, but they're not a strict requirement for admission. We'll prioritize lab access for creators with limited hardware at home.

8. What are you looking for in applications?

We're looking for:

- Demonstrated interest or experience in games, code, 3D, or design
- A basic portfolio (Roblox game, code samples, art, etc.)
- A clear idea of the kind of African/Lagos experience you want to build
- Realistic availability for the 30-day sprint

9. How do I apply?

Click the **"Apply Now"** button on this page and complete the application form. We'll review all applications, reach out to shortlisted candidates for a quick follow-up if needed, and send final decisions before the program start date.
